JAKELE

GUNSMITH - MASTER WORKSHOP

... from practice – for practice

with in-house
100 m shooting range

Dear friends,

Greetings! Welcome to the Jakele product area. At the beginning of 2022, we had the pleasure of presenting our Jakele J1 bolt action rifle - a revolutionary, safe and unprecedentedly elegant hunting rifle. The Jakele Relax System with the cocking lever directly on the trigger guard won over the experts in no time. A great pleasure for us. But the J1 also appealed to those hunters who value a beautiful appearance. A confirmation for us. All products that are created in our master gunsmith's workshop or offered by Jakele Jagd + Natur have to prove their usefulness and quality workmanship in addition to their appearance.

For example, we have perfected the J1 Nachsuche, made the back of the All-Terrain adjustable and expanded the range of designs to include the J1 Spirit, J1 Spirit Game and the J1 Unikum and the J1 Lady.

Our demands on form are just as high as on function, because this combination makes hunting safer: what feels like an extension of your own arm, like an extension of your own view, will be handled more confidently. When something is not a foreign object but a piece of jewelry, mindfulness increases. This is exactly what you will find in the models of the J1 series - a tool with personality that has become an ornament. Or simply:

J1 - You and your gun in perfect symbiosis.

Allow yourself to be inspired by our new catalog - what you like inspires our work. What you lack awakens our innovative instinct. Let's set hunting standards together!

With best regards

Andreas Jakele

JAKELE J1

... with the revolutionary clamping lever:

- ✓ intuitive handling
- ✓ noiseless, feather-light cocking –
at the same time, the reticle remains perfectly on the target
- ✓ lightning-fast, situation-appropriate handling in the firing position:
⇒ middle finger cocks or uncocks the weapon
silently at any time in fractions of a second
- ✓ remove your hand from the clamping lever ⇒ everything relaxed

Safety thought through to the end.

Jakele J1 – the revolution in weapons development

Absolute safety. Intuitive guidance and form to perfection.

The dream image of a hunting weapon – now a reality from the house of Jakele.

Unlock, shoot, lock – the eternal triad!

This command is always with you, occupies the back of the head, demands constant review. Demanded. That is past. Because the Jakele J1 is always relaxed. It is only cocked immediately before firing. A new cocking lever directly on the trigger guard is only moved during conscious aiming. It slides automatically as soon as the hand or fingers are removed from the pistol grip, thereby decocking the weapon.

The J1 concentrates voltage exclusively when it is needed: for firing.

The perfect hunting experience does not consist of one shot.

It is formed from many dreamlike moments: The smell of morning mist, the sound of silence, the feeling that breath and heartbeat become one when a piece of game is shot. It is the reverence that is conveyed to the hunted piece by the last bite according to ancient custom and that is experienced in the handed over shooter's break.

These are moments of solitude close to nature and times of great gratitude to creation.

And yet a single moment of inattention, a second of carelessness can turn the dream into a nightmare.

All it takes is one shot that goes off unintentionally.

A shot that misses, that kills, that injures. Or just the leaden shock of forgetting to relax or secure the safety catch..

It is enough to know that an accident could have happened to ruin the day and, in the worst case, the life. At best, a fear remains, an uncertainty that overshadows many hunting moments afterwards.

With the Jakele J1, securing or consciously relaxing the hunting weapon is not necessary. Gone. Past. Instead of uncertainty, which is dangerous and stressful, the J1 always offers a relaxed basic state due to the new cocking lever.

Tension only at the moment of firing the shot means Relaxation for all other moments of the hunt.

The Jakele Relax System is nothing less than revolutionized safety. For a clear head, for safe and relaxed hunting.

Jakele J1

Revolutionary safe, extremely guidable, elegant, in highest quality – for for hunting in line with the law of the hunt.

Revolutionary safety

Jakele Relax-System® with unique preload. Thanks to a revolutionary cocking lever on the trigger guard, the rifle is not cocked until it is consciously cocked immediately before firing by pulling the cocking lever to the pistol grip. When the hand is removed from the rifle, the cocking lever slides back to its original position. It is the original idea of rifle handling - it is the "bow-and-arrow principle". If the bowstring is cocked, the arrow is ready to shoot. If the string is not cocked at will, the weapon is safe. Always. Absolutely. Without restriction and without further action.

revolutionary safe

Hunting according to hunting rules

The functional design conveys a deeply traditional hunting attitude. The focus is on respect for creation. Both with regard to man and his safety, as well as to the game and hunting.

hunting spirit

Highest product quality

To meet the high quality standards, we use only the best materials and surfaces, from the barrel to the smallest screw. The self-centering four-warts locking mechanism with very large locking surfaces is the heart and guarantor for outstanding precision and robustness. Absolutely silent cocking and decocking of the rifle is a matter of course for us. All essential components are manufactured in Bavaria – Bavarian Precision!

highest quality

guiding

Intuitive guidance

The ergonomic design, short dimension, slim straight pull during the repeating process, low profile and light weight allow intuitive handling and smooth movement from mounting to firing.

Elegant design

The overall lines, the round implementation of the entire receiver, the perfectly shaped trigger guard, sloping to the rear, with the cocking lever flowing into it, as well as the trigger located in the trigger guard, with minimal trigger travel, transitioning to the elegant, ergonomic stock shapes make the J1 a real feast for the eyes and hands.

elegant

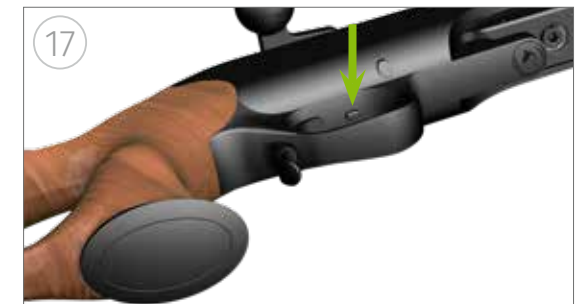

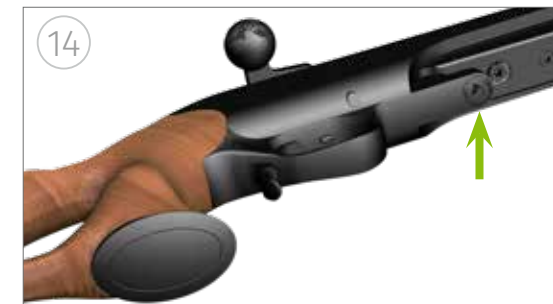

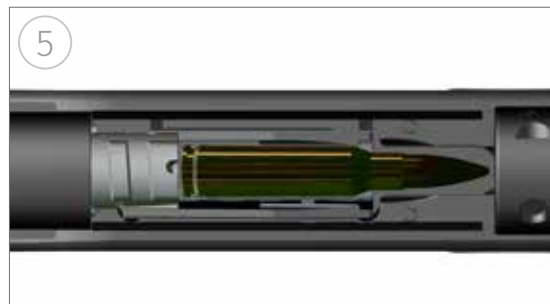

Modular structure

Thanks to the innovative stock attachment, any change of the stock is possible in just a few steps. Interchangeable systems such as barrel and breech can be used depending on the desired caliber. The entire rifle can be easily disassembled into a few modular components using the J1 key integrated in the forearm.

modular

Details and special features

Revolutionary cocking lever - Jakele Relax system

In the Jakele Relax system, safety is thought through to the end. The J1 is only cocked by the innovative cocking lever immediately before firing. For cocking, the middle finger pulls back in an intuitive movement with minimal effort. When the hand loosens - for example after firing or for position correction - the cocking lever slides back to its original position. This automatically decockes the rifle and makes it completely safe.

Compact, light and comfortable to handle

The design is compact but slim. An elegant appearance that convinces with modern ergonomics.

The perfect aesthetics are not only pleasing to the eye, but also make the J1 a lightweight, enormously maneuverable weapon weighing just approx. 2.6 and 2.7 kilograms respectively. And a round-body receiver - a real pleasure to hold.

Quick change of the stock

Change the stock in minutes. Depending on the hunting situation, change from wood to synthetic or vice versa in a few simple steps. The stock mounting screw is loosened or tightened with the help of the J1 key integrated in the fore-end. The tension-free fore-end mount, maximum temperature tolerance and three-dimensional locks also ensure that the point of impact remains stable when the stock is changed.

Self-centering four-lug locking mechanism

The high-precision, self-centering bolt head with four-locking lugs rotates 90° into the barrel and provides an enormously high locking surface for maximum safety and precision.

Switchable fine trigger

The trigger itself is always important for an accurate shot. The fine trigger of the J1 impresses with its top characteristics: it is extremely dry and has no creep. The trigger pull is switchable between »hunting« and »match«. The J1 fine trigger is convincing in every position with minimal trigger travel (trigger stop) and is nevertheless completely safe before and after every shot due to the relaxed cocking lever.

Bavarian Precision Mount

With the Bavarian Precision Mount (BPM), one-handed operation is easily possible when mounting and dismounting the scope (the holding hand on the rifle, the other hand remains on the glass) with no more conflicts with elevation turrets of the scopes. The mount locks via a control cam and features extreme strength (also suitable for heavy optical devices) without disturbing the shapely overall appearance of the J1.

Straight pull action

The shapely bolt handle with ball enables fast repeating in straight pull without significantly restricting the view of the receiver. The view of possible engravings is preserved, the overall picture remains coherent.

Highest quality, Bavarian Precision

Quality in detail determines the longevity and value retention of products from Jakele. Many ideas, many years of knowledge and experience and the very highest standards flow together in the development and are implemented with partners who meet the same standards in their field. All essential components are manufactured in Bavaria - this guarantees solid production, a consistently reliable weapon. You can trust that. Trust in Jakele quality.

Revolutionary safety

Innovative clamping lever

Can a hunt be planned from start to finish? Maybe. But that doesn't make it predictable. A lot can happen between the hunt and the draw – you are in nature, in its original state. Terrain and weather, man and animal meet. Natural forces and primal instincts.

The controllable part is the equipment, the most important part of the equipment is the weapon. Why should we accept potential gaps in the security situation here of all places? Or in other words: How safe can a rifle be?

With the Jakele J1, you have the greatest possible safety. Thanks to a revolutionary cocking lever on the trigger guard, the rifle is only ever cocked when it is consciously cocked. The cocking lever is always pulled to the pistol grip just before firing. If the hand or fingers are removed from the cocking lever, the cocking lever automatically slides back into the starting position.

The rifle is immediately decocked and therefore completely safe. Safety for the highest demands. Met by the house Jakele.

JAKELE J1

Intuitive handling

Shape and design

You don't have to reinvent the wheel – but you must make sure that it runs smoothly!

With the Jakele J1, all "wheels", meaning all components, had to be put to the test. Now the J1 is the tool of choice for routine use in any hunting situation. A well thought-out ergonomic shape, the short dimension, a low design and the low weight are the basis for intuitive handling.

Few individual parts make assembly simple and fast, leaving many variants to choose from: Stock sets in wood or synthetic are interchangeable. Versions for left-handers and various shortened barrel lengths are available at no extra charge.

Effortless handling also includes the straight pull of the bolt action lever, a switchable fine trigger and the sling swivel full ring (aluminum hard anodized) on the barrel.

An extremely dry fine trigger without creep, the minimal trigger travel (trigger stop) and the extremely low cocking weight maintain the guidance until the shot is fired. The Jakele J1.

JAKELE J1

Perfect design

Know-how meets design

True beauty comes from the inside – but it is recognized from the outside. With the J1, that's 100 percent true. It will be recognized. The lines are harmonious, the implementation of the entire receiver is coherent – a round body for maximum comfort. The cocking device is on the inside, the trigger guard slopes down to the rear and the cocking lever is embedded in it. look solid and elegant.

The trigger convinces with the minimal trigger travel and the stock shapes with ergonomic design. The J1 makes no compromise in either form or function. Because Jakele knows how technical know-how and timeless design can go hand in hand. When a stock change is required, it can also be done quickly. When the barrel length is adjusted, the rifle sling attachment can also be balanced.

When the silencer is mounted, the wearing comfort may remain optimal and a bolt-handle should not hide any refinement. The J1 has found the most beautiful form for every function – therefore: You will recognize it. Everywhere.

JAKELE J1

Highest product quality

Material & Processing

Eiffel Tower, Ulm Cathedral, Colosseum – milestones of their time, milestones that have far outlasted their time. Because their designers thought not only of beauty, but of beauty that lasts.

For the J1, materials and processes were chosen that guarantee longevity: The BDC coating (Bavarian Diamond Coating) of the barrel. The distortion-free inlay of the fore-end stock with integrated J1 key. The hammer-forged rifle barrel with high-graded military steel including hammer-forged chamber. The spring-loaded barrel mounting nuts (no rattling when the barrel is removed). The bolt with self-centered four-lug locking system and extra large locking surfaces. The three-dimensional barrel receiver with secured point of impact despite oil in the barrel bed.

All factors that testify to forward-looking riflesmithing. The fact that all essential components are manufactured and assembled in Bavaria is a testament to a sense of quality and tradition. In the end, it is the customer's benefit that counts. The extended modular system, for example, bundles the movement sequence in just one component, and the barrel and breech are shot together, regardless of which barrel length is selected from the range.

The optics package is also exemplary: the locking of the scope mount via a control cam is extremely firm, allows heavy optical devices to be mounted without any problems and remains stable even with attachment technology. Because no cocking slide is placed under the scope, it can also be mounted very low. Conflicts with elevation towers on the scopes when mounting or dismounting the mount are history, a thing of the past. Once again, what counts in the end is quality. It pays off. Because it is endless.

JAKELE J1

Clear values

The three-shot philosophy

There are three wishes in the fairy tale, it starts on three and all good things are not four, five or ten – they are three. Three shots are not one too many.

Hardly any hunting situation requires more. The magazine of the J1 – two rounds plus a cartridge in the chamber – does not simply transport ammunition. It shows the shooter's huntsmanlike attitude, it proves that a thinking, responsible and considered mind is at work.

Behind the Jakele J1, with its deliberately non-removable magazine with quick discharge, is a person with a clear attitude and deeply hunting values.

With the J1, hunting is not about ambition, but about reverence. Respect for creation, respect for nature and game, care for the safety of all those involved in a hunt. These beliefs are expressed in the rifle itself. The three-shot philosophy is visible in the design: slim, elegant, highly functional and easy to handle.

The J1 is a threefold statement on hunting according to hunting rules and says from the mount to the shot: I know it – I want it – I can do it!

JAKELE J1

Everything at a glance

A new weapon must be able to answer many questions:

What can it do?

How good?

Does it add value?

Also for me?

The J1 ...

... is suitable for beginners, made for experienced hunters and perfected for professional hunters. The dream image of a weapon has become a reality.

... so that hunting accidents are just sad history in the future. Revolutionary safety for relaxed hunting.

... because functionality and leadership are based on a value attitude. The three-shot philosophy unfolds an elegant design.

... by executing breakthrough innovations in the highest quality materials and manufacturing. Quality that pays off for beauty that lasts.

JAKELE J1

JAKELE J1 SPIRIT

Jakele J1 Spirit

Perfect noblesse

We at Jakele believe that good things can be made better. And if it can no longer be improved, it can always be made even more beautiful. That's why we've given our J1 a variant that underscores the uniqueness of this rifle with its extraordinary look.

The Jakele J1 Spirit impresses with a fully engraved receiver, a fully engraved trigger guard – including its inner surface – and in each case with a wooden stock of the absolute high-

est class. The Spirit exudes luxurious elegance. Arabesques and acanthus leaves not only rank razor-sharp in plane, but glide seamlessly over the edges of the engraved surfaces.

The ergonomic shape also provides a perfectly prepared "canvas" for the intricate decorations.

On the slender round body, every flower, every leaf, every Fibonacci spiral appears harmonious – as if it had not been

engraved into the alloy, but had grown out of it. A wealth of details, without disturbing the tranquility of the overall picture. Ornamentation that discreetly plays with traditional motifs and thus remains timeless.

Thanks to the latest technical possibilities, engraving is possible that delivers a highly precise result even in the finest details.

All this makes the J1 Spirit a picture of consummate nobility.

JAKELE J1

SPIRIT AND SPIRIT GAME

J1 Spirit and Spirit Game

Four walls, a roof and a door – a house is finished. Versailles, Buckingham Palace, Neuschwanstein – strictly speaking houses and yet so much more: These "houses" are our (European) epitome of castle. Why? It can't be the sheer size, not the pomp.

There are enough buildings that are bigger, more golden, more spectacular. Nevertheless, when we think of Neuschwanstein, we think of a castle, but not at all when we think of the Munich Olympic Center. The secret lies in the landlords – or rather in the landlady. It is the castle of a sun king and a fairy tale king, that of the queen of an empire. They are residences where great philosophy and thoughtful personality come to the fore. They are buildings that do not copy fashions, but became style-setters themselves.

With the Spirit Game, you get the opportunity not only to own a J1, but to make it your own. Embedded in the existing ornamentation, an oval remains on the left and right for hand engraving. A coat of arms, a game motive, a symbol from your life story – there are (almost) no limits to the individual artistic implementation. A personalized engraving of the pistol grip cap is of course also included with the Spirit Game. J1 Spirit Game means playing in the premier league with style.

JAKELE J1 SPIRIT UNIKUM

Jakele J1 Spirit Unikum

My chronicle, my weapon.
Uniquely hand engraved.

Once, twice, infinitely often. Exact reproducibility has its purpose. Quality, function, safety – there are areas where it's good if it's always the same. No one wants experiments in root canal treatment, and statics do not forgive creative estimations. You have to be able to rely on products, on tools. An example: your own hunting rifle. This must be even more reliable than oneself, have a quality that does not last years, but outlasts generations. Exactly like the Jakele J1. At the same time, the preferred rifle is also an expression of

personality. And it is a chronicle. With the right finishing, it can even become a visible chronicle of special hunting moments. If one – and here it may be – gives room to art. The Jakele J1 Spirit Unikum, serial number 1,000, is an example of how a beautiful rifle can become a remarkable one-of-a-kind. It succeeds because the system case, the trigger guard on the outside and the pistol grip cap serve as a "canvas" for landscapes, hunting grounds, initials and deer. Engravings with an unmistakably personal touch,

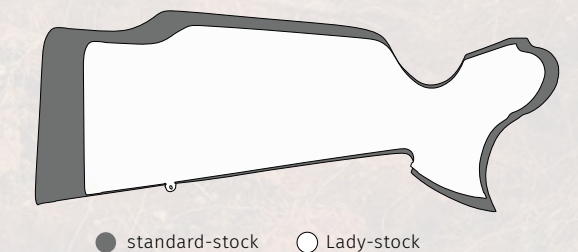

completely hand-engraved by a master of her craft. One of the most experienced and accomplished firearms engravers in the world, she translates customer requests to create a fully composed work of art: Her Jakele J1 Spirit Unikum – with motifs from the world of hunting. Each unique piece of the J1 Spirit line also receives an exclusive serial number made of round numbers or equal digits.

...the diamond among hunting rifles for the ladies' hand

Jakele J1 Lady-stock

- Special stock for the delicate hand
- Stock length 350 mm (340 mm, 330 mm optional)
- Short pistol grip
- Available in all stock wood classes
- The J1 Lady is available in a weapon overall length from 85 cm

Jakele J1 Lady

- ✓ ingeniously safe
- ✓ light as a feather tensioning
- ✓ extremely easy to handle
- ✓ intuitive, silent handling
- ✓ unsurpassed elegance

Jakele J1 Lady

Quite large for the smaller stature

Rarely does a person fit the norm. Very rarely does a normal rifle fit a female hunter. The solution could now lie in a simple stock shortening - is that enough? Woman could also come up with a complete custom-made - can she?

The J1 Lady anticipates the basic requirements for a lady's gun and leaves room for individual demands. It is no secret that size and weight and stock should be adjusted together for a small or narrow anatomy. The result of the J1 is a comfortable and safe stop. When it comes to weight, there is also the fact that fewer grams are not paid for with more recoil (when using silencers). Finally, with the J1, the system is already "petite" - but not in the sense of playful or power-

less, but because freed from unnecessary ballast. The three-round magazine, the round-body system case: this is precise reduction. Stock shortenings up to 330 mm fit shorter arm lengths, and the short pistol grip is geared to small hand sizes and arm angles. At only about 2.6 kg, the J1 is nice and light out of the box and doesn't have to worry about weight with the precious wood stock.

With its compressed pistol grip and pleasing cheek piece

milling, the Lady stock demonstrates the highest ergonomics while retaining its solid elegance. The proportions are right even with mounted scopes, adapter mounts or silencers. Men who have not wasted their energy on length growth will also benefit from the J1 Lady. The J1 Lady is not a "ladies' saddle", it fits just as well in the hands of a male hunter as in those of a female hunter, provided they are of short stature. The name will not irritate, the J1 is a lady after all: the repeater from the house Jakele.

The rifle of a woman

Perfected for hunting

Women are different from men. On average, they have a different arm angle than men, they have a lower center of gravity, they have a smaller muscle fiber cross-section and lower absolute strength, they are said to be more sensitive and more empathetic - according to the statistics. The most common consequence that engineers and developers of all countries draw from this: Shrink products, pink name, bow around it: done! And what exactly are women supposed to gain from this?

In the master workshop of the House of Jakele, the rifle-smiths have designed a new hunting weapon, the J1.

With the J1, they have presented a revolutionary weapon. The J1 is lightweight, practically a featherweight of around 2.6 kilograms depending on the version. It is ergonomically optimized so that it literally fits in the arm and hand.

The compact shape, the round-body receiver plus Bavarian Precision Mount for one-handed scope mounting guarantee leading elegance. Easy stock shortening down to 330 mm and quick stock changes simplify many hunting situations. The greatest and most important relief, however, is the new cocking lever on the triggerguard: the J1 is cocked easily and intuitively with the middle finger immediately before firing, with negligible effort.

And what do the female hunters get out of it?

Just as much as the hunters! When safety, manageability and design meet absolute requirements, body size is irrelevant. When a new solution revolutionizes an industry, it does not do so with muscle mass. In short, the J1 is a woman's ideal weapon. Not because it's dressed up for ladies, but because it's been perfected for hunting.

JAKELE J1

Jakele J1 All-Terrain Tracking

- synthetic stock brown or "British Racing Green"
- stock length 370 mm (other stock lengths optional)

Jakele BPM-mounts

Bavarian Precision Mount.

With the Bavarian Precision Mount (BPM), one-handed operation is easily possible when mounting and dismounting the riflescope (the holding hand on the weapon, the other hand remains on the glass) and there are no more conflicts with elevation turrets of the riflescopes. Because the locking levers do not extend beyond the mount, it can also be mounted very low.
The mount locks via a control cam and is characterized by extreme strength and also allows the mounting of heavy optical devices without any problems and remains stable even with attachment technology, without disturbing the shapely overall appearance of the J1.

- The advantages at a glance:
- elegant mounting allows ZF mounting at low height
 - clearly defined locked and unlocked position of the locking levers
 - ➔ the locking levers can no longer conflict with the conflict with the elevation towers
 - the BPM allows one-handed operation when raising/ lowering the scope lowering the riflescope
 - ➔ locking takes place via a control cam, not via a thread. This also allows the mounting of heavy optical equipment
 - ➔ made of high-quality steel, hardened and BDC-coated (carbon coating, corrosion-free)
 - compatible with Blaser models from 1993 onwards
 - available for Swarovski-SR rail, Zeiss-VM rail as well as ring mounts with 30 mm or 25.4 mm rings

Also designed for heavy optical equipment

**VANWARD silencer
from the house of Jakele**

Optimized noise damping, reduced recoil and outstanding performance characteristics with very slim diameters characterize the Vanward silencers. The ratio of performance to weight and volume pushes the limits of what is physically possible, even with the 3D manufacturing technology used here.

- incomparable price/performance ratio
- completely made of titanium
- 3D printed
- very slim transition from damper to barrel
- Norwegian make

»HUNTER PRO«

HUNTER PRO was developed for hunters and shooters who require maximum noise reduction and reduced recoil. It has extreme performance characteristics with a diameter of only 48 mm. The performance to weight and volume ratio pushes the limits of what is physically possible, even with the 3D manufacturing technology used here.

- diameter: 48 mm
- total length: 210 mm
- real extension: 135 mm
- total weapon length
with stock length 370 mm and 44 cm barrel: 102,5 cm
- weight: 295 g
- sound reduction up to: 38 dB
- mounting type: over barrel

Jakele target stick Z4

for the safe shot –
even over long distances

Jakele Z4 target stick - One-handed operation for all cases

An A380 has the most seats, 4K offers excellent picture quality and there are a few hundred horsepower between a 911 and a 2CV - any questions?

Probably not. And why? Because these numbers and letters are not just model types, serial numbers or size specifications, but stand for legendary examples of their trade.

The Z4 aiming stick from Jakele is a technical masterpiece. The Z4 (aiming with 4 legs) is the first choice when it comes to reliable hits in various types of shots, as an observation stand and is an exemplary mountain stick when closed.

One hand on the weapon, the other hand on the target stick. The Z4 can be set up quickly and flexibly with one hand. The individual height of the Z4 can be flexibly adjusted by changing the distance between the two support legs for the front and rear stock rest. This makes numerous shooting positions possible. positions, which are always chosen by the shooter and not dictated by the terrain, because the 2-point rest always guarantees enormous stability.

Sheathed aluminum, extremely UV-resistant rubber fittings, optimum grip and extremely quiet construction - the Z4 is solid down to the last detail and designed for durability. With its carbon-look design, it also makes a good visual impression and is comfortable to wear, even in cold winter temperatures.

Three basic sizes adapt to every body size (short - up to 174 cm, medium - from 175 to 190 cm and long - for everyone from 191 cm) and in an extra short version with a pole length of 125 cm, the Z4 is suitable for sitting shots.

This target stick for all occasions, an all-rounder »Made in Germany« trades under patent no. 102013201478 - or you forget the number and name and just say: The Z4 from Jakele.

Jakele target stick Z4 II

The reliable hit in various types of stroke even at long distances.

The individual height adjustment is made flexibly by changing the distance between the two support legs for the front and rear stock rest and thus offers a variety of shooting positions, completely independent of the terrain.

The movable fork for the fore-end rest enables an adjustment range of approx. 50 m at a distance of 100 m. The enormous stability of the 2-point rest makes the Z4 an indispensable companion in almost all hunting situations. Also ideal for use as an observation tripod. Can be used as a robust mountain pole when closed.

- material: aluminum, coated
- absolutely silent
- comfortable to wear, even in cold winter temperatures
- optimum grip (non-slip)
- all rubber fittings made from extremely UV-resistant material
- visually appealing design (carbon look)

- target sticks sizes:
 - short – body height up to 174 cm
 - medium – body height 175 - 190 cm
 - long – body height from 191 cm
 - extra short – sitting type of stop / 125 cm stick length

- made in Germany, patent no. 102013201478

- increases the value of our beloved walnut woods

Item no 3120003-002 18,- €

Jakele spotting scope sight QAS

➔ **Unique for fast target acquisition at high magnifications.**

The new patented Jakele spotting scope sight QAS (Quick Alignment System) enables fast target acquisition via a red dot sight mounted on the spotting scope. After adjusting the sight axis to the image axis once, the target can be acquired in a wide variety of positions via the red dot at lightning speed and is centered in the image when looking into the eyepiece, regardless of the magnification factor.

- red dot sight with adjustable light intensity
- additional hole for quick detection of the red dot
- compatible with almost all spotting scopes, cameras and video cameras
- no change to the mounting plate (reflected)

Pictures show application examples with optional equipment and devices
